

Solution

The *Solution* was developed at the end of 2005 by Kevin Clark and Andrew Elliott for sailors who want a quality high performance single hander but are too light for the Phantom. Constructed using epoxy resin and a foam core the *Solution* is a thoroughly modern solution for those wishing to race a very light single handed boat.

The *Solution* comes complete and ready to race; the Mylar film sail is set on a Selden mast and is fully adjustable from the cockpit using duel controls. It's carefully designed side deck and floor depth has been specifically tailored for comfortable sitting out. The foils are moulded in glass fibre ensuring consistency as well as strength.

Specification			
Length	3.90 metres	Spars	Sealed aluminium rig
Beam	1.75 metres	Sail	Round head laminate sail
Construction	Epoxy fully self draining	Sail Area	8.5 sq metres
Hull Weight	56 kg	Portsmouth Number	1070 class supplied
Foils	Pivoting centreboard and rudder
